

# SeaBatch User Manual

## System Requirements

- SeaDAS 6.2 installed (<http://oceancolor.gsfc.nasa.gov/seadas/>).
- *bash* as your UNIX shell environment.

## Installation

- Download the file *seabatch2.0.tar.gz*.
- Place the file *seabatch2.0.tar.gz* into the directory where you want SeaBatch to installed.
- Open a terminal window.
- Change directories to the SeaBatch installation directory: `cd seabatch_installation_directory`
- Unzip the file *seabatch2.0.tar.gz*: `tar -xzipf seabatch2.0.tar.gz`
- Run the script *install\_seabatch.sh*: `./install_seabatch.sh`
